

## Why DermaPen?

- Minimised epidermal damage means less pain and erythema
  - Easy to manoeuvre around all facial contours with the benefit of adjustable needle heights – this means the DermaPen can reach areas that the dermal rollers cant, such as around the nose and mouth
  - Because of vertical delivery, needles easily penetrate scar tissue without risk of bending
- Create multiple insertions quickly

**VERSUS**

## Dermal Rollers

- More painful with a lot more bleeding due to epidermal damage caused by flick and tear action
- Difficult to use in small or curved areas
- Difficult to insert needles into scar tissue
- needles can be bent
- No needle height adjustment for areas such as eyes and lips

IMPROVES ACNE SCARS ( 5 SESSIONS, EVERY 2 WEEKS)

## Dermapen

### Advanced Skin Needling

DermaPen uses multiple needles that vertically pierce the skin to create similar vertical channels which are designed to achieve the same effect, with minimal epidermal damage. It is thought that it is the greater density of channels that leads to enhanced results over dermal rollers.

### Advantages

Better results – greater number of insertions

Speed – much faster – thousands of holes

Shorter treatment times

Adjustable needle depth with one needle head

Less pain and faster recovery time

Easy to treat under the eyes, side of the nose and across the top lip

Minimal side effects and no cross- Infection

**Price from €199 per treatment**

### Application and Effect

- ◆ Skin Tightening
- ◆ lifting and rejuvenation
- ◆ Acne scars and wound healing
- ◆ Improves wrinkles and fine lines
- ◆ Minimises pore size
- ◆ Improves stretch marks
- ◆ Treats alopecia

### Pre and Post Treatment

After treatment you will look as though you have moderate to severe sunburn and your skin may feel warm and tighter than usual. This is normal and should subside after 1 to 2 hours, and will normally recover the same day or within 24 hours. Any undesirable post treatment reddening or discomfort can be controlled using Sensicare.

To increase recovery times and get better results we recommend a skin care regime to go with your treatment.
